MISSISSIPPI STATE DEPARTMENT OF HEALTH2013 MAY 28 PM 4: 33 BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION FORM CALENDAR YEAR 2013

REST ESTATES
Public Water Supply Name List PWS ID #s for all Community Water Systems included in this CCR The Federal Safe Drinking Water Act (\$DWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year of electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please check all boxes that apply. Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other) Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill)
Email message (MUST Email the message to the address below)
Other MONTALY NEWRITTEL IKINTED on REVELLE OF MITTLY INVOICE Date(s) customers were informed: 05/25/20,17/ CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used Date Mailed/Distributed: / / CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed:____ As a URL (Provide URL) As an attachment As text within the body of the email message CCR was published in local newspaper. (Attach copy of published CCR or proof of publication) Date Published: CCR was posted in public places. (Attach list of locations) Date Posted: / / CCR was posted on a publicly accessible internet site at the following address (DIRECT URL REQUIRED): Thereby certify that the 2012 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply. TENDEL METALL, OWNER Name/Title (President, Mayor, Owner, etc.) Deliver or send via U.S. Postal Service: May be faxed to: Bureau of Public Water Supply P.O. Box 1700 (601)576-7800 Jackson, MS 39215 May be emailed to: Melanie. Yanklowskka msdh. state. ms. us

2012 Drinking Water Quality Report Ridge Crest Estates PWS 0240251

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water source is the Pascagoula aquifer.

Source water assessment and its availability

The source water assessment has been completed and our water source ranks as LOWER for susceptibility to contamination. This report is available in the office.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

April 1, 2013 Message from MSDH Concerning Radiological Sampling

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007-December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance and Enforcement, Bureau of Public Water Supply, at (601)576-7518.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Ridge Crest Estates is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG or	MCL, TT, or	Your	Ra	nge	Sample				
Contaminants	MRDLG		<u>Water</u>		_	<u>Date</u>	Violation	Typical Source		
Disinfectants & Disinfectant By-Products										
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)										
Haloacetic Acids (HAA5) (ppb)	NA	60	3	NA		2012	No	By-product of drinking water chlorination		
Chlorine (as Cl2) (ppm)	4	4	0.9	NA		2012	No	Water additive used to control microbes		
TTHMs [Total Trihalomethanes] (ppb)	NA	80	1.44	NA		2012	No	By-product of drinking water disinfection		
Inorganic Contamin	Inorganic Contaminants									
Barium (ppm)	2	2	0.0086	NA		2011		Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits		
Fluoride (ppm)	4	4	0.176	NA		2011	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories		
Nitrate [measured as Nitrogen] (ppm)	10	10	0.08	NA		2011	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits		

at consumer taps (ppm)	1.3	1.3	0	201	12	0		No	Corrosion of household plumbing systems Erosion of natural deposits
Inorganic Contamina Copper - action level	ants	Γ		1	1				
Contaminants	<u>MCLG</u>	<u>AL</u>	Water	<u>Dat</u>	- /	Exceeding AL		<u>AL</u>	Typical Source
(pCi/L)	0	15	1.9 Your	NA Sam	ple	2012 # Sampl	No Excee		
226/228) (pCi/L) Alpha emitters	,								Erosion of natural deposits
Radium (combined	0	5	0.193	NA		2011			Erosion of natural deposits
Uranium (ug/L)	0	30	0.067	NA	1	2011		No I	Erosion of natural deposits
Radioactive Contam	inante			L	<u> </u>		L		
Thallium (ppb)	0.5	2	0.5	NA		2011	No		Discharge from electronics, glass, and Leaching from ore-processing sites; drug factories
Selenium (ppb)	50	50	2.5	NA		2011		No r	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines
Mercury [Inorganic] (ppb)	2	2	0.5	NA		2011		No r	Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills Runoff from cropland
Cyanide [as Free Cn] (ppb)	200	200	15	NA		2011			Discharge from plastic and fertilizer factories Discharge from steel/metal factories
Chromium (ppb)	100	100	0.5	NA		2011]		Discharge from steel and pulp mills; Erosion of natural deposits
Cadmium (ppb)	5	5	0.5	NA		2011]	No r	Corrosion of galvanized pipes; Erosion of natural deposits; Discharge from metal refineries; runoff from waste batteries and paints
Beryllium (ppb)	4	4	0.5	NA		2011]	No c	Discharge from metal refineries and coal-burning factories; Discharge from electrical, aerospace, and defense industries
Arsenic (ppb)	0	10	0.5	NA		2011]	No c	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Antimony (ppb)	6	6	0.5	NA		2011]	No r	Discharge from petroleum refineries; fire etardants; ceramics; electronics; solder; test addition.
Nitrite [measured as Nitrogen] (ppm)	1	1	0.02	NA		2011]	No s	Runoff from fertilizer use; Leaching from eptic tanks, sewage; Erosion of natural deposits

Term	Definition
ug/L	ug/L: Number of micrograms of substance in one liter of water
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (μg/L)
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)
NA	NA: not applicable
ND	ND: Not detected
NR	NR: Monitoring not required, but recommended.

	A SERVICE OF THE SERV						
Important Drinking Water Definitions							
Term	Definition						
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.						
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.						
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.						
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.						
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.						
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do reflect the benefits of the use of disinfectants to control microbial contaminants.						
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.						
MNR	MNR: Monitored Not Regulated						
MPL	MPL: State Assigned Maximum Permissible Level						

For more information please contact:

If you have any questions concerning your water supply, please contact Michael McFall.
